NOTE: During the bleeding procedure, watch the reservoir sight glass very closely to make sure there is always a sufficient amount of brake fluid. When the sight glass changes from dark to light, refill the reservoir before the bleeding procedure is continued. Failure to maintain a sufficient amount of fluid in the reservoir will result in air in the system.

3. If thickness of either brake pad is less than 3.2 mm (0.125 in.), the brake pads must be replaced.

NOTE: The brake pads should be replaced as a set.

4. To replace the brake pads, use the following procedure.

- A. Remove the wheel.
- B. Remove the cap screws securing the caliper to the bracket; then remove the cotter pin securing the pads and remove the pads.

- D. Repeat step C until the brake lever is firm.
- E. At this point, perform step B, C, and D on the other FRONT bleeder screw; then move to the REAR bleeder screw and follow the same procedure.

4. Carefully check the entire hydraulic brake system that all hose connections are tight, the bleed screws are tight, the protective caps are installed, and no leakage is present.

CAUTION
This hydraulic brake system is designed to use high-temperature DOT 4 brake fluid only. If brake fluid must be added, care must be taken as brake fluid is very corrosive to painted surfaces.

INSPECTING HOSES
Carefully inspect the hydraulic brake hoses for cracks or other damage. If found, the brake hoses must be replaced.

C. Install the new brake pads; then secure with the pin and cotter pin. Spread the cotter pin.

CHECKING/REPLACING PADS
The clearance between the brake pads and brake discs is adjusted automatically as the brake pads wear. The only maintenance that is required is replacement of the brake pads when they show excessive wear. Check the thickness of each of the brake pads as follows.

D. Secure the caliper to the knuckle and/or axle housing with the cap screws. Tighten to 2.8 kg-m (20 ft-lb).

- 1. Remove a front wheel.
- 2. Measure the thickness of each brake pad.

Shock Absorbers

REMOVING

1. Secure the ATV on a support stand to elevate the wheels and to release load on the suspension.

⚠ WARNING

Make sure the ATV is solidly supported on the support stand to avoid injury.

2. Remove the two cap screws and nuts securing each front shock absorber to the frame. Account for bushings and sleeves from each.

AF-605D

⚠ CAUTION

On the rear suspension, additional support stands are necessary to support the rear axle when the shock absorbers are removed or damage may occur.

3. Remove the two cap screws and nut securing each rear shock absorber to the frame and rear suspension. Account for bushings and sleeves from each.

AF-626D

4. Compress the shock absorber spring, remove the retainer, and remove the spring.

AF730D

CLEANING AND INSPECTING

■ NOTE: Whenever a part is worn excessively, cracked, or damaged in any way, replacement is necessary.

1. Clean all shock absorber components in parts-cleaning solvent.
2. Inspect each shock rod for nicks, pits, rust, bends, and oily residue.
3. Inspect all springs, spring retainers, shock rods, dampers, bushings, shock bodies, and eyelets for cracks, leaks, and bends.

INSTALLING

1. Place the shock absorber spring over the shock absorber, compress the spring, and install the retainer.
2. Place bushings and sleeves (where appropriate) into shock eyelet; then install shock with two cap screws and nuts. Tighten all nuts to 4.8 kg-m (35 ft-lb).

⚠ CAUTION

Do not tighten the nuts beyond the 4.8 kg-m (35 ft-lb) specification or the shock eyelet or mount WILL be damaged.

■ NOTE: The rear shock absorber-to-lower A-arm cap screw torque factor is 2.8 kg-m (20 ft-lb).

3. Remove the ATV from the support stand.

Yamaha moto-4 225 repair manual free download.

This website offers a wide range of manuals ordered by category. Yamaha Corporation is a large company that offers a variety of musical products and services.
